PROFESSIONAL SUMMARY

Industrial Engineering professional with 3+ years' experience across lean initiatives, production plan execution, and facility layout design, now expanding into a Lead Engineer scope that bridges shop-floor operations with custom software tooling. Built and deployed three live internal web applications for asset tracking, machine documentation, and spare parts inventory. Comfortable owning a project end-to-end — from time study and layout on the floor to the app that tracks it.

CORE SKILLS

Industrial & Lean Engineering

- Time study, SMV estimation, line balancing, capacity planning
- SMED / quick changeover, 5S, Kaizen, Kanban
- Lean Six Sigma (in progress), root cause analysis (5 Whys / PDCA)

Development & Data

- HTML, CSS, JavaScript, PHP, Python (basic)
- Git & GitHub version control
- Excel Power Query, data pipelines & automation

Design & CAD

- AutoCAD Web floor & facility planning
- SketchUp 3D modeling, precision rack/storage design
- Adobe Photoshop, UI/poster layout design

Languages & Soft Skills

- Khmer (native), English (professional working proficiency)
- Team leadership, cross-functional communication
- Public speaking & training facilitation

PROFESSIONAL EXPERIENCE

Lean & Innovation Supervisor — Industrial Engineering

Jul 2024 – Present

Manufacturer of travel, lifestyle & eyewear goods • Siem Reap, Cambodia

- Led lean production initiatives to reduce waste and streamline workflows across multiple lines.
- Designed optimized floor layouts and ran pilot trials for process enhancements.
- Built and deployed three live internal web apps: a heavy-duty rack/storage tracker, a per-machine digital documentation "passport," and a spare parts inventory tracker.
- Delivered technical training on new processes and digital systems to production teams.
- Led and partnered with cross-functional teams on machine planning and workflow standardization.
- Supported frontline troubleshooting for mechanical and production issues to minimize downtime.

Key Achievements

- Spearheaded digital transformation efforts through pilot automation projects.
- Standardized machine planning process across the floor in partnership with maintenance.
- Delivered smoother onboarding of new systems through hands-on technical training.

Industrial Engineering Executive

Jun 2022 – Jul 2024

Same organization • Siem Reap, Cambodia

- Reviewed and optimized operations across multiple production lines.
- Analyzed production costs and performed root cause analysis on recurring issues.
- Ensured quality assurance standards were consistently met.
- Worked closely with maintenance teams to implement technical upgrades.
- Contributed to cost-reduction strategies by optimizing processes and eliminating inefficiencies.
- Supported daily problem solving and root cause analysis with cross-functional teams.

KEY PROJECTS

- Rack Tracker — live web app for heavy-duty rack/storage asset tracking (location, status, allocation history).
- Machine Documents — digital "passport" app centralizing maintenance history and specs per machine.
- Factory Inventory — live spare parts inventory app with real-time stock and location visibility.
- SMED / Quick Changeover — facilitated trials that reduced setup time and improved schedule adherence.
- Throughput Improvement — re-balanced lines and optimized layout to remove bottlenecks.

EDUCATION

Bachelor of Science in Information Technology

Aug 2022 – May 2025

Build Bright University — Siem Reap Campus

- Focus: digital systems, programming (Python, PHP), graphic design.
- Relevant coursework: database systems, web development, systems analysis.

CERTIFICATIONS & TRAINING

- Lean Six Sigma (in progress)
- 5S and Kaizen
- Internal lean and digital manufacturing training
- Safety Awareness & Quality Control Training
